1920 CENSUS—INDEX.
DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in the city of Ankara, Turkey. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program that included aerobic, strength, and flexibility exercises. The control group did not participate in any training program. Physical fitness was measured at the beginning and end of the 12-week period using a series of tests: 1000m run, 50m sprint, 50m shuttle run, sit and reach, and push-up. The results showed that the experimental group had significantly higher scores than the control group in all five tests at the end of the 12-week period. The 1000m run test showed the most significant improvement in the experimental group. The results suggest that a 12-week training program can improve the physical fitness of 10-year-old children.
